

Product Description

The PQR D52 Power Quality Recorder is a state of the art, fully integrated instrument which measures, records, and reports power disturbances, aiding in the analysis of power quality for AC power in medical, commercial and industrial applications.

Simple to operate:

Plug the power cord into a grounded outlet

Periodically connect to a computer for reports.

Stores events in non-volatile RAM.
1500 Event Storage per input
6,000 Events in all

Stores the average reading every minute for up to 11 days on each channel Disturbances detected on the Hot and Neutral Lines, as well as Temperature and Humidity channels are recorded by their time, date, magnitude, and duration in a non-volatile RAM memory. This data is then retrieved from the analyzer through its serial communications port.

PQR - D52

Power Quality Recorder

Highlights

- Single-phase Power Quality Recorder with Temperature & Humidity Ports!
- User - Friendly
- Programmable
- Hot and Neutral Monitoring
- Fast Impulse Detection
- Easy to Understand Reports
- Port for optional Temperature probe
- Port for optional Humidity probe
